

Name & College: Bhumika & MIET

Subject: SWOT assignment

Personal SWOT

Choose a short-term STEM goal you want to achieve in the next 3–6 months.

Build and deploy 2 full-stack MERN projects with REST APIs, JWT authentication, and CI/CD pipelines on AWS — securing a software development internship within 6 months.

What is one 3–6 month STEM goal will bring you closer to your dream?

Think of previous life experiences and identify your personal SWOT. Using the guiding questions, reflect and write your strengths and weaknesses in relation to your chosen short-term goal.

Strengths and Weakness are internal factors.

Note: Think of every S, W, O and T that is relevant to the goal you are working on.

Strengths

- What do you do well without much effort?
- When do you feel confident or in control?
- What roles or tasks suits you naturally?

- I learn new frameworks and tools quickly through self-study and online resources.
- I am consistent with DSA practice and problem-solving on LeetCode daily.
- I am comfortable building backend logic — APIs, databases, and server-side code feel natural to me.
- I communicate clearly in writing and document my projects well on GitHub.
- I stay motivated independently without needing external deadlines or supervision.

Write 3–5 points relevant to your goal

Weakness

- What's one moment you felt stuck or unsure?
- What habit do you think limits your progress?
- What feedback for improvement do you receive from friends/teachers?

- I feel less confident speaking in group discussions or presenting technical ideas verbally.
- I sometimes spend too long perfecting one feature instead of shipping and iterating quickly.
- My frontend design skills (CSS layouts, responsiveness) are weaker compared to my backend work.
- I have limited real team experience — most projects have been solo or academic group work.
- I sometimes skip writing tests, focusing only on making features work functionally.

Write 3–5 points relevant to your goal

Personal SWOT

For the same goal as you chose in the previous page, use these guiding questions, reflect and write your opportunities and threats relevant to your chosen short-term goal.

Opportunities and Threats are external factors.

Opportunity

- Who/what around you helps you perform better?
- What resource, idea, or support will help you reach your goal faster?
 - India's startup ecosystem is booming — companies like Razorpay, Cred, and Zepto actively hire fresher Full Stack and DevOps engineers.
 - Free world-class resources (The Odin Project, KodeKloud, AWS Free Tier) let me upskill without cost.
 - Open-source contribution on GitHub builds real credibility and gets noticed by hiring managers.
 - Remote internships and freelance platforms (Internshala, Wellfound) give access to real-world projects before graduation.
 - Cloud certifications (AWS Cloud Practitioner) are achievable in 2–3 months and significantly boost employability.

Write 3–5 points relevant to your goal

Threats

- What external obstacle makes things harder for you?
- What situation causes stress, confusion, or pressure for you?
 - High competition from CS students across India who also know MERN stack and are applying for the same roles.
 - Fast-moving tech industry — tools like Docker, Kubernetes, and cloud platforms keep evolving, requiring constant upskilling.
 - Economic slowdowns can reduce fresher hiring at startups, making the job market more competitive suddenly.
 - Imposter syndrome and comparison with more experienced developers can reduce confidence and slow progress.
 - Without real internship experience, many companies filter out resumes at the initial screening stage.

Write 3–5 points relevant to your goal

Using SWOT, write 3 action plans that you can implement to achieve your goal.

- How will you use your strengths/opportunities to achieve your goal?
- What plans can you implement to overcome your weakness/threats?

Use Strengths →

Leverage strong backend skills and learning pace to build 2 complete MERN projects in 3 months, deploy them on AWS, and document them thoroughly on GitHub for recruiters.

Overcome Weaknesses →

Join 1 online tech community or group project to practise verbal communication. Set a "ship it" rule — deploy every feature within 48 hours regardless of polish.

Leverage Opportunities →

Apply to 5 Internshala/Wellfound internships monthly. Complete AWS Cloud Practitioner prep alongside project work. Contribute 1 PR to an open-source MERN or Node.js repository.

Manage Threats →

Differentiate by combining Full Stack + DevOps skills — deploy every project with Docker and GitHub Actions CI/CD. Stay consistent; 1 hour of upskilling daily compounds quickly over 6 months.
